Lesson 1: Introduction - Vibe Coding, Lovable, Course Information

How This Course Works

Hands-On First

- Short lessons to learn the basics
- Hands-on activities to learn how to use tools
- Homework to apply your learning
 - It won't take long and it will be fun!

Build to Launch

- Learn how to make a product
- Use search engine optimization (SEO)
- Market product

Vibe Coding

1. Describe

Convert your product requirements into clear, conversational prompts. You define the rules; AI defines the architecture.

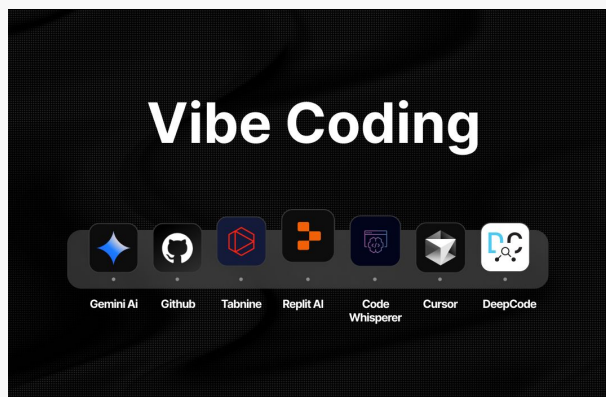

2. Build

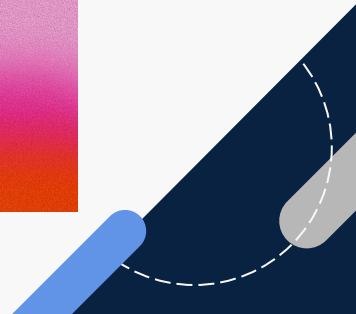

AI will interpret requirements to generate responsive code, manage standard databases, and layout elements instantly.

3. Launch

Review the prototype, dynamically tweak specific features, sync with modern production tools, and push to cloud hosting under 5 seconds.

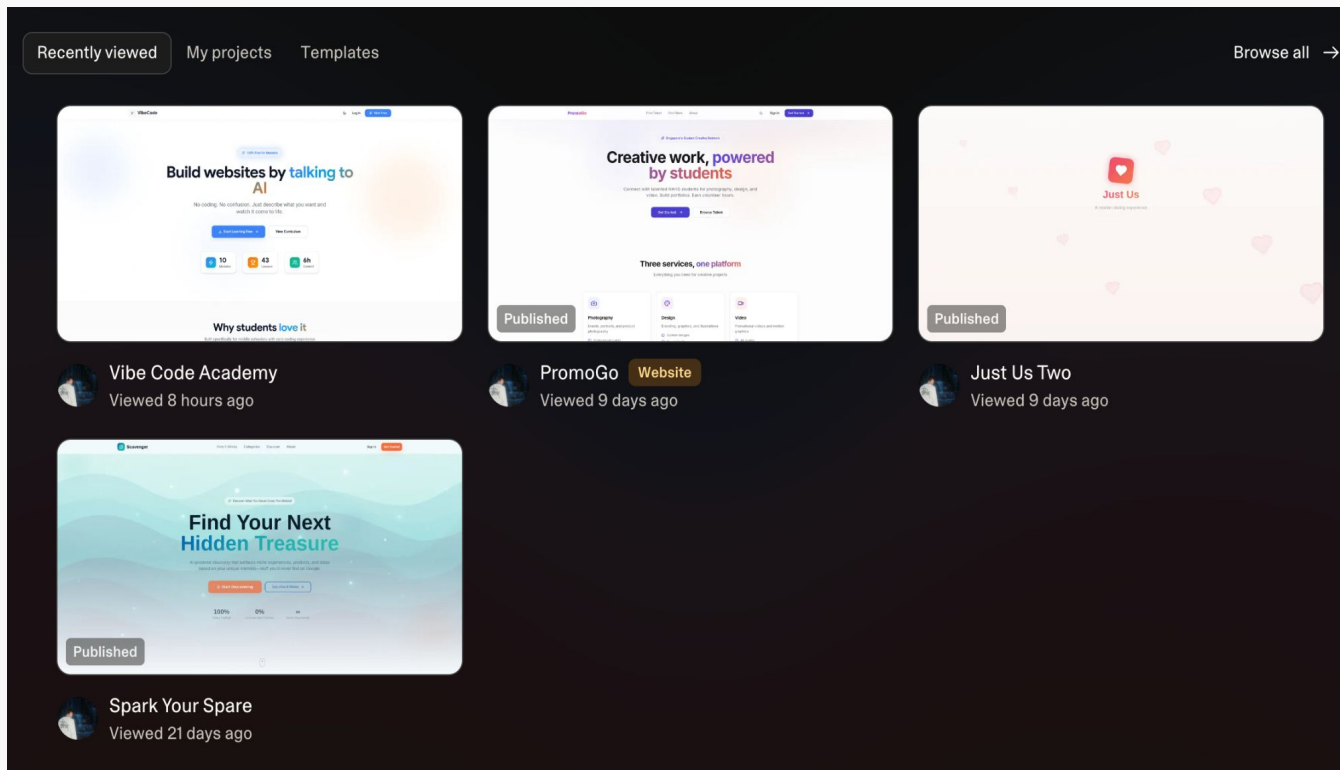

Lovable

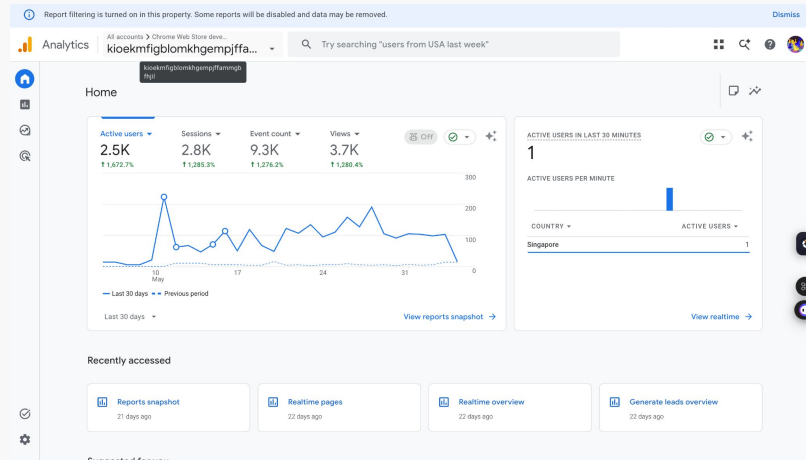

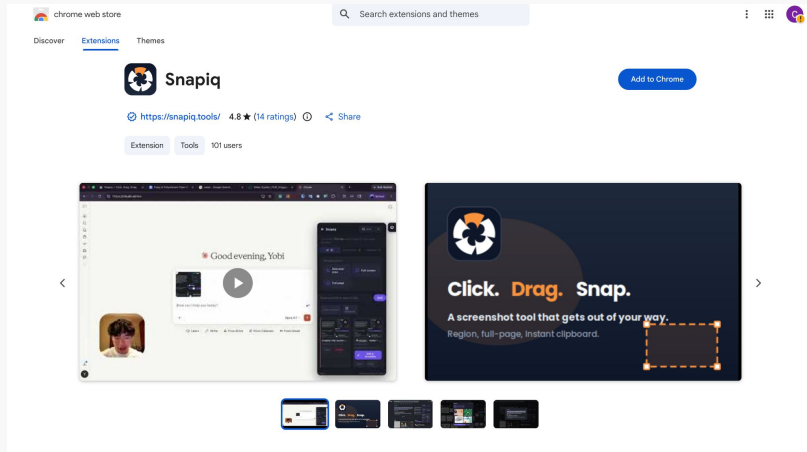

- Open Lovable and experiment

What Can You Build?

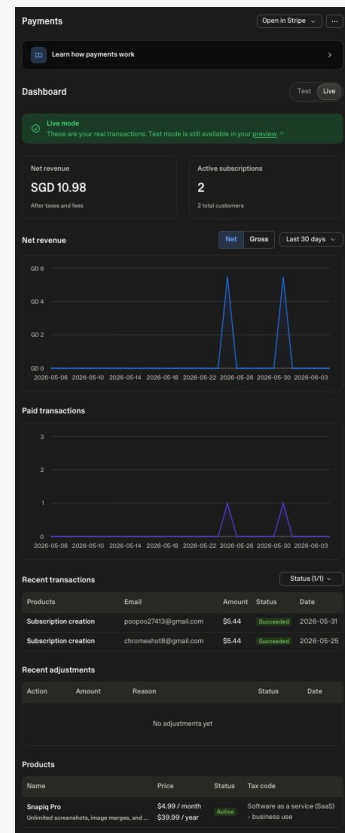

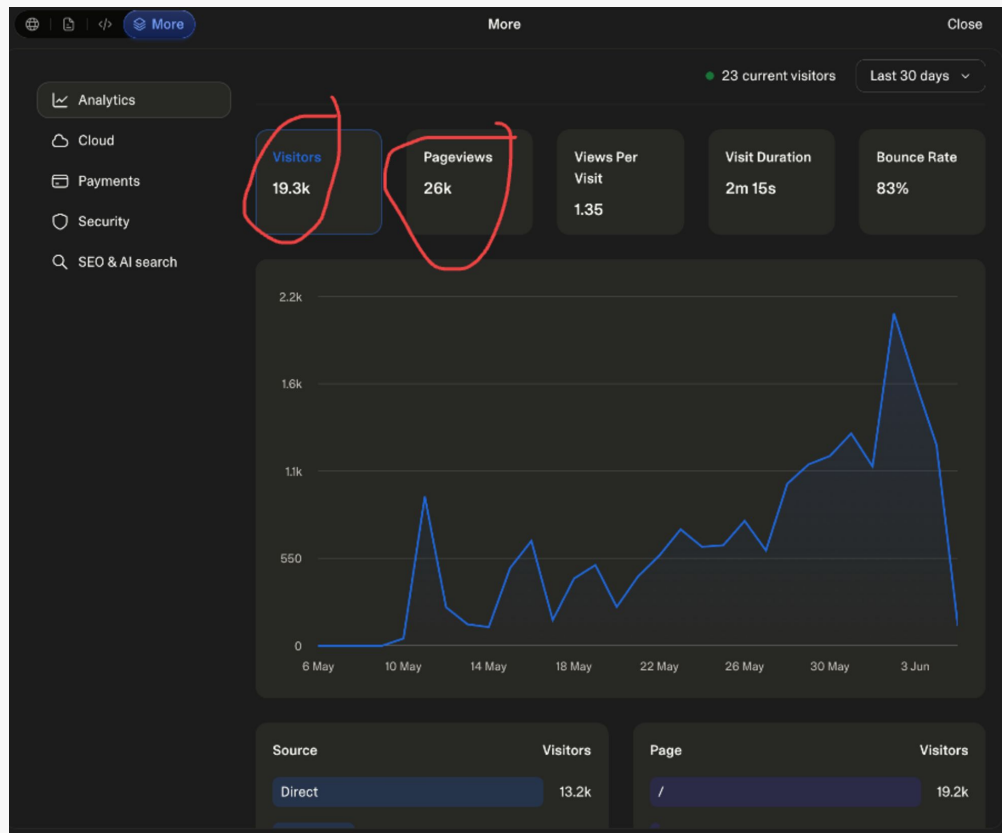

Apps, chrome extensions, websites, trading algorithms, etc.

Example: Snapiq chrome extension

<https://snapiq.tools/>

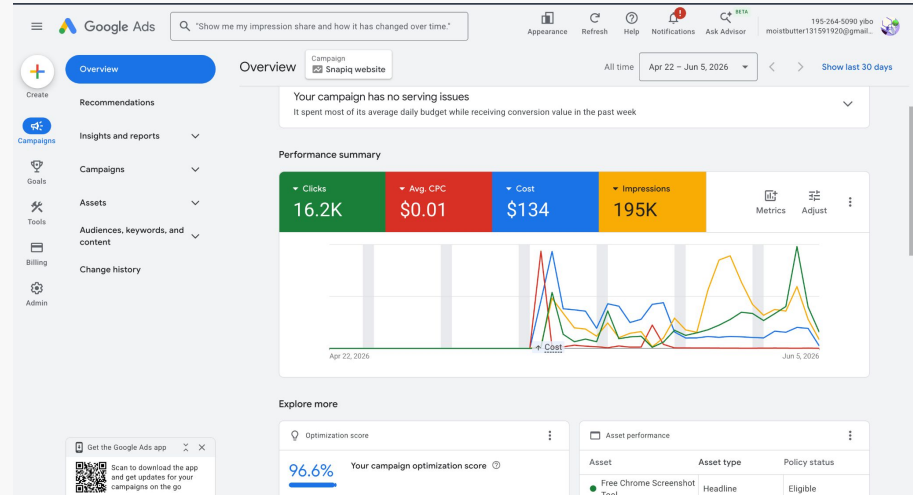

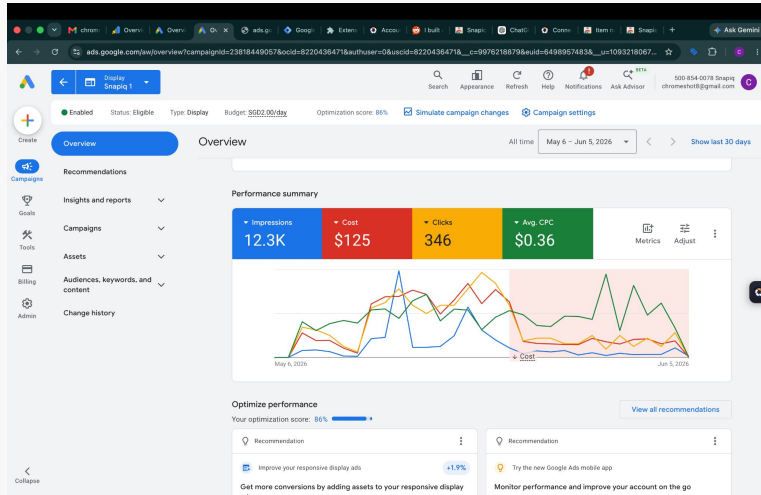

Lovable Stats

Website Traffic Example

SEO(Search engine optimization), Google Ads, Social Media Marketing, Word of Mouth, etc.

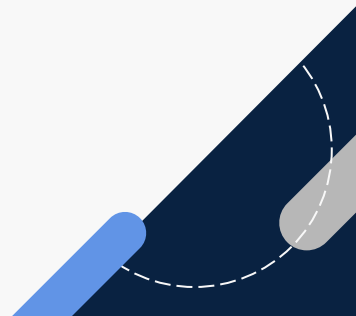

The Art of Prompting

Bad prompting:

- “Create a website for my course
- “Create a modern website for my coding course with a homepage and lessons.”

The Art of Prompting

Role: You are an expert educational web designer and full-stack developer.

Goal: Create a responsive website for a 15-lesson course called “**Vibe Coding: Build Apps with Lovable & GitHub.**”

Target audience: High-school and early-college students with little to no coding experience.

Core pages required:

1. Landing page (course overview + value proposition)
2. Curriculum page (15 lessons with goals and agendas)
3. Lesson page template (objectives, agenda, exercises)
4. About page (instructor + course philosophy)
5. Resources page (GitHub links, tools, templates)

Key features:

1. Clean, student-friendly UI
2. Clear call-to-action buttons (Enroll / Start Lesson)
3. Mobile-first design
4. Easy navigation between lessons

Design style:

1. Modern, playful, and approachable
2. Light background, bold headings
3. Friendly typography (not corporate)

Output required:

4. Folder structure
5. Core page code
6. Reusable lesson template
7. Brief explanation of design decisions
8. Build the site so it can be easily expanded with more lessons later.

Ethical Considerations

Input Bias

When entering a prompt, make sure you don't make it reflect your own bias.

Representative

If you are creating a tool such as ChatGPT, for example, you want to it gives responses that represents a wide range of human perspectives.

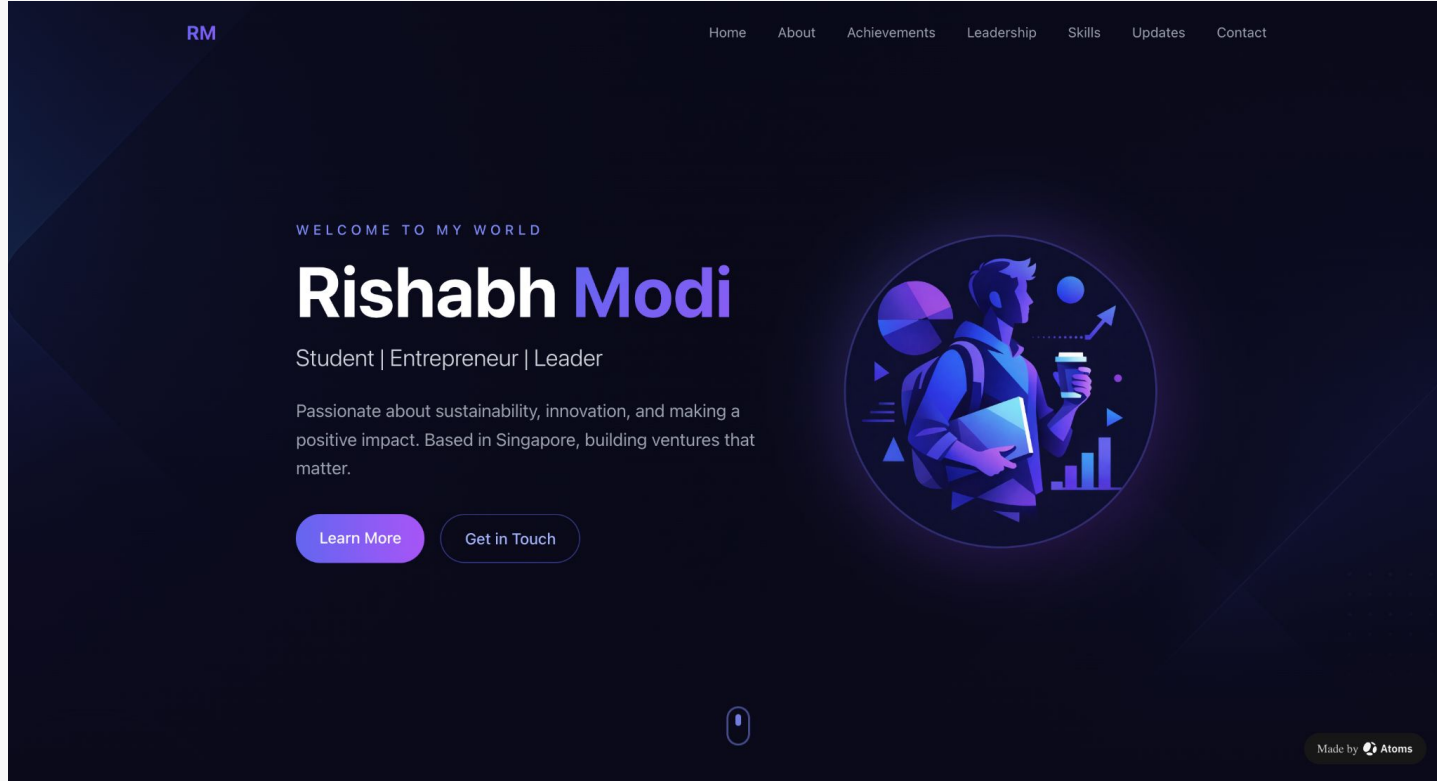

The Amplification Loop

When humans repeatedly interact with biased AI tools, studies prove they actively learn to become more biased themselves

Task

Design an “About me” website

Next class: Experimenting with Lovable
