Solo Sprint: Build Your First Draft

• • : : : . . .

1 Draft a comprehensive descriptive prompt defining your target web portal layout.

2 Paste the engineered instruction text into Lovable to create your website.

3 **Crucial:** Copy-paste and save your exact prompt text into a safe notes file for later edits.

! Unsure about which project you are doing? Contact a class tutor right away!

Using AI to Make Better Prompts

1. Search up Claude

You can use the website or the desktop app if you have it.

2. Sign in with an account

You can use any email address to sign in because the free tier subscription also works for this.

3. Ask it to revise your prompt

See the example on the right →

Example prompt to Claude:

"Help me revise my prompt for Lovable to create a website for my vibe coding academy. The site should include module info, exercises, and walkthroughs. I am tutoring high school students — it should look clean, not too AI-generated. Include working sign in and sign out. Help with design too.

Original prompt here"

Using Refined Prompts

Be specific about layout, colours, and audience.

Check over the prompt to ensure it has the elements you want

Paste it into Lovable and add the following before the refined prompt: "This is a refined prompt, make the required changes: "

Using Refined Prompts

You're going into
breakout rooms.

30

minutes

When done:

Post the link to your website

Next lesson: Introduction to Claude Code

Homework: build a Lovable site that predicts or forecasts something. A stock direction tool, a weather predictor, etc. Pick something real. Pull data from somewhere if you can. Show your reasoning for the prediction logic.

You can use tools like Claude to refine your prompt. DM your HW website to Yibo, Rishabh, or Nirvan on Slack
