Lesson 4: Claude Skills & Excel

Active Homework Review

Launch & Demo

Present your fully compiled custom browser extensions built using Claude Code.

- Does it install cleanly and run natively?
- What problem does your extension solve?
 - If it works perfectly, what exactly should it do?

Architectural Hurdles

Deconstruct individual problem-solving workflows and challenges faced.

- Share your troubleshooting process.
- What was the hardest code block to successfully get working?

What are Claude Skills?

1. Reusable Instructions

Teach Claude your workflows, brand guidelines, or domain preferences once. Skills store these as reference files so you never have to repeat yourself across conversations.

2. On-Demand Loading

Skills stay packaged until needed. Claude identifies the relevant skill for your task and loads it automatically, keeping your context window lean and efficient.

3. Consistent, Standardized Outputs

Define exactly how Claude should deliver results — formatted documents, code modules, structured data — and get the same quality every time without re-prompting.

How to Set Up a Skill

1. Access Portal

Go to Settings on Claude.ai.

3. Upload File

Upload your SKILL.md file with your instructions.

2. Add Skill

Click "Add Skill" under the Customize tab.

4. Attach

Link the skill to a project so it loads automatically.

How to Set Up a Skill

The screenshot shows the 'algorithmic-art' skill configuration page. On the left, a sidebar lists various categories like 'Skills', 'Connectors', and 'Personal plugins'. The main area is titled 'algorithmic-art' and contains a 'Create skill' button. Below this, there's a section for 'name: algorithmic-art description: Creating algorithmic art using p5.js with seeded randomness and interactive parameter exploration. Use this when users request creating art, algorithmic art, flow fields, or particle systems. Create original algorithmic art rather than copying existing artists' work to avoid copyright violations. license: Complete terms in LICENSE.txt'. The description is followed by a paragraph about algorithmic philosophies and a list of steps for 'ALGORITHMIC PHILOSOPHY CREATION'.

name: algorithmic-art description: Creating algorithmic art using p5.js with seeded randomness and interactive parameter exploration. Use this when users request creating art, algorithmic art, flow fields, or particle systems. Create original algorithmic art rather than copying existing artists' work to avoid copyright violations. license: Complete terms in LICENSE.txt

Algorithmic philosophies are computational aesthetic movements that are then expressed through code. Output .md files (philosophy), .html files (interactive viewer), and .js files (generative algorithms).

This happens in two steps:

1. Algorithmic Philosophy Creation (.md file)
2. Express by creating p5.js generative art (.html + .js files)

First, undertake this task:

ALGORITHMIC PHILOSOPHY CREATION

To begin, create an ALGORITHMIC PHILOSOPHY (not static images or templates) that will be interpreted through:

- Computational processes, emergent behavior, mathematical beauty

The screenshot shows the 'Directory' of skills. It features a search bar and filters for 'Anthropic & Partners'. The skills are displayed in a grid, each with a title, a brief description, and a link to the skill page. The skills include:

- /canvas-design**: Create beautiful visual art in .png and .pdf documents using design philosophy. You should use this skill when t...
- /web-artifacts-builder**: Suite of tools for creating elaborate, multi-component claude.ai HTML artifacts using modern frontend web...
- /theme-factory**: Toolkit for styling artifacts with a theme. These artifacts can be slides, docs, reportings, HTML landing pages, etc...
- /internal-comms**: A set of resources to help me write all kinds of internal communications, using the formats that my company lik...

Plugins

Claude in Microsoft Excel

Advanced Data Operations

Use Claude directly inside Excel to analyze, explain, and act on your spreadsheet data — no switching tabs or copy-pasting.

- **Formula Assistance:** Write, fix, and explain complex formulas in plain English
- **Data Analysis:** Summarize trends, flag anomalies, and interpret results across large datasets
- **Audit & Validation:** Trace logic errors and verify business rules step-by-step

Claude

hello claude, analyze this sheet and tell me the 5 year cagr net debt change

I'll find the net debt line in the Model sheet and compute the 5-year CAGR.

Workbook Statistics

Claude

Read data

Last actual FY is FY2025 at \$5,403M. Five year prior = FY2020 at \$7,450.2M.

5-year CAGR of Net Debt (FY2020 → FY2025): -6.31%

FY2020 Net Debt: \$7,450.2M
FY2025 Net Debt: \$5,403M
Model A7E138

CAGR = $(5,403 / 7,450.2)^{(1/5)} - 1 = -6.31\%$

Net debt has declined at roughly a 6.3% annual rate over the past five years — consistent with the post-MillerCoors deleveraging trend visible across the row (peak -\$11.5B in FY2016 down to -\$5.4B in FY2025).

Want me to drop this calc into a cell on the Model or Summary Page?
